

## Consolidated Capper

### Features

- Wide variety of options available to suit various applications and installations
- The TG arm performs the unique function of transferring the cap to the chuck, and positively gripping the container during cap application
- Extensive variety of chucks available for standard and special applications

## Consolidated TG Capper: Rebuilt or Pre-Owned Only

The Consolidated TG capper line uses the unique TG arm for positive control cap transfer to the chuck, and a container gripping system to ensure container control with a minimum of moving parts. The TG series can handle a wide variety of container and closure styles, and is well-suited for glass, plastic, metal, or fiberboard containers.

This capper can be adapted to perform additional functions such as plugging and inserting, using a variety of available chucks for standard and special applications. The Consolidated TG line is capable of speeds from 20 to 750+ containers per minute, accommodating caps up to 110 mm in diameter.

This capping machine is available as rebuilt or pre-owned equipment only.
